DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-20, drawn to an optic switching system and the method, classified in class 385, subclass 18.
- II. Claim 21, drawn to a push/pull spring, classified in class 81, subclass 300+.

The inventions are distinct, each from the other because of the following reasons:

Inventions of Group I and Group II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the claimed spring without clip around the strip can be utilized. The subcombination has separate utility such as a spring adapted on an optical platform, which is not rotating.
